# Survey Technical Information

Reference ID	0005	Themes	ethnicity, conflict
Country	Tanzania	Observation unit	individuals
Location	Dar es Salaam, Pemba and Unguja	Target population	Tanzanian citizens in Dar es Salaam and Zanzibar with voting right
Dates of Fieldwork	Mar. 24 – Apr. 14, 2011	Sample size	600
Related project(s)	Prevention of Violent Conflict in Africa		

## Research Summary: Prevention of Violent Conflicts in Africa

Numerous studies have addressed the issue of violent conflict in Africa, but most have tended to focus either on statistical interpretations of the causes of conflict, including poverty and inequality, or on examinations of the political processes of individual countries. This study considers the dynamics of Africa's conflicts from a perspective that combines structural causes and political processes by examining the interface between them, the research niche. "Structure" in this context mainly denotes a socio-economic structure and as used here refers specifically to horizontal inequality (HI) as put forth by the Centre for Research on Inequality, Human Security and Ethnicity (CRISE) of Oxford University. "Political process" refers to dynamic interaction among diverse political groups operating from backgrounds that include political institutions adopted on short-term bases, influences of neighboring countries (regions), trigger factors, and motivations of soldiers. This study aims at establishing a theoretical framework, comparing cases in about eight African countries, and deriving the policy implications.

## Major Survey Items:

Demographic attributes: gender, age, education, occupation, ethnicity, religion, and the place of birth

Living conditions: household assets and basic human needs satisfaction Identity: ethnic identity, religious identity, and regional identity

Inter-group relations: personal relationships, contact frequency, trust, hatred, inequality, and fairness

Political attitudes and behavior: voting, party support, violence, and corruption

## Reports(Articles):

## [Publications]

• <u>Preventing Violent Conflict in Africa Institutions, Inequalities and Perceptions</u> Edited by Yoichi Mine, Frances Stewart, Sakiko Fukuda-Parr and Thandika Mkandawire, Palgrave Macmillan, 2013.

**Stratification:** 3 regions (Dar es Salaam, Pemba and Unguja), districts (Ilala, Kinondoni, Temeke, Zanzibar Central, Zanzibar South, Zanzibar North "A", Zanzibar North "B", Zanzibar Urban, Zanzibar West, Wete, Misheweni, Chake Chake, and Mkoani), male/female

Stages: wards (68) - starting points - households - individuals

**Cluster size:** approximately 9 (ranging from 1 to 17) households per wards; 1 person per household; numbers of ward per regions are fixed as follows: Dar es Salaam (34), Unguja (16), Pemba (18); numbers of ward per district within each region vary in proportion to the population size of district.

**Selection method(s):** wards: simple random sampling from a list; starting points: arbitrarily selected by supervisors (such as a school or church within the ward); household: systematic sampling with interval of 5 households; individual: Kish Grid (alternating the gender of respondents within the wards)

Survey language(s): Swahili

Data-collection method: face-to-face interview

Unit nonresponse\* rate: 0.36 \*including both noncontact and refusal

**Substitution method:** Substitute respondents are taken from another household within the same wards.
